The laboratory grown clammod described in this Report (Report) has been graded, tested, analyzed, examined and/or inscribed by International Germological Institute (IGLI). A laboratory grown indiamod is one that has essentially the same chemical, physical and optical properties as a mined diamond, with the exception of being grown by man (a manufactured product). This is a manufactured (man-made) diamond produced by CVD (chemical vapor deposition) or by HPHT (Riph pressure high temperature) growth processes and may include post-growth treatments to after the color. IGL employs and utilizes those techniques and equipment currently available to IGLI, including, without limitation, 10X magnification, corrected triplet loupe, binocular microscope, master color comparison stones, non-contact-optical measuring device. Spectraphotometer and such other instruments and/or processes as deemed appropriate by IGLI in the case where diamond melee is set in a mounting, a random testing procedure, regarding the diamonds being of natural of inboratory created origin will be performed. This Report Includes advanced security features A duly accredited gemologist or jeweler can advise you with respect to the importance of and interesticitorship between cut, color, clainly and cardin weight.
